Mindy Chen

mindychxn@gmail.com | (647) 773-2973 | github.com/mindychxn | mindychen.netlify.app

Education

University of Waterloo *September 2022 - Present*
Bachelor of Computer Science (GPA: 3.9) *Graduating 2027*
Relevant Courses: Algorithms, Data Structures, Databases, User Interfaces, Operating Systems, OOP

Skills

Languages: TypeScript, Javascript, Kotlin, Java, SQL, C++, C
Frameworks/Libraries: React, Spring Boot, Vue, Node.js, Tailwind, MobX, Jest, Express
Databases & Cloud: PostgreSQL, SQL Server, AWS S3
Technologies: Git, Figma, Linux, Jira, Notion, Storybook

Experience

Software Engineer | *Faire* *January 2026 – Current*
- Engineered and shipped a subscription membership upsell banner surfaced during checkout, driving a **26%** lift in membership enrollment and **21%** increase in orders placed by enrolled members
- Built a retroactive savings feature that surfaced past order discounts to users, resulting in **28%** lift in membership enrollment and **12%** increase in enrolled member orders

Software Engineer | *Faire* *May 2025 – August 2025*
- Led full-stack development of new welcome-offer flow in Kotlin and React, driving 3% marketplace-wide conversion lift and enhancing internal experimentation platform for cross-team A/B testing
- Increased GMV by **4%** by extending Kotlin/Protobuf gRPC product-search service to power personalized recommendations in automated marketing email campaigns
- Migrated five MobX stores to React hooks with complete Jest test suites, raising test coverage by **6%**

Full-stack Developer | *CI Technologies* *September 2024 – December 2024*
- Built and deployed **20+** RESTful APIs using Spring Boot and JPA, implementing caching on high-traffic endpoints to reduce average latency by **20%**
- Developed dynamic query filtering system using SQL scalar functions, reducing query response times by up to **35%** to support real-time filtering across large datasets
- Created scheduled task to hard-delete obsolete records from SQL Server**,** recovering **40 GB** of storage

Software Developer Intern | *University Health Network* *January 2024 – April 2024*
- Integrated TOTP-based two-factor authentication using Google Authenticator and magic link authentication into primary FeathersJS starter repository**,** establishing security baseline for future applications
- Refactored legacy codebase and reengineered **10+** components, reducing reported bugs by **15%**
- Implemented comprehensive test suites, raising coverage to **85%** and reducing post-release bugs

Software Developer Intern | *Martinrea International* *May 2023 – August 2023*
- Built component library with **30+** reusable custom components using React, TypeScript, and Tailwind, reducing development time **25%** and standardizing UI patterns
- Developed real-time computer-vision quality monitoring system in close collaboration with QA and plant operations, increasing production throughput by **7%** through instant defect detection
- Streamlined component testing with Storybook, accelerating design and code review cycles by **15%**

Projects

Taskify | *https://perntodo-client.onrender.com*
- Built a secure full-stack task management app using the PERN stack (Postgres, Express, React, Node.js), implementing bcrypt.js and JWT for authentication and session routing
- Architected REST API with Express.js, implementing proper error handling, input validation, and RESTful conventions for reliable CRUD operations on tasks and user data

Adopt-A-Mon | *https://github.com/mindychxn/adopt-a-mon/*
- Built a Pokémon adoption marketplace with Flask, Node.js/React, and MySQL, architecting the normalized database schema for scalability and implementing real-time browsing, filtering, and transaction processing
